

I Know a Rhino!

There are five	species of rhino.
Several species of rhino are	in danger of extinction.
Rhinos very rarely	attack people.
They eat	grass or shrubs.
Rhinoceros	means “nose horn.”

Poachers kill rhinos	for their horns.
Some people think rhino	horns are magical.
Rhino horns are made of	keratin, just like your fingernails. That's not magic.
Fewer than 100	rhinos from Java remain today.
